dermatitis associated with infections by  
*Staphylococcus intermedius* in dogs.

Does your dog  
suffer from  
'hot spots'?

 **dermcare** VET  
THE SPECIALISTS IN SKIN CARE

## Common appearances of bacterial infections:

## Reasons for bacterial skin infections:

The majority of skin infection cases in dogs are due to underlying conditions which allow the low numbers of normal bacterial residents to overgrow and cause disease.

## Underlying causes for bacterial infections:

- ✓ **Allergies: pollen, grass, food (meats), fleas**
- ✓ **Hormonal problems (including Cushing's disease and thyroid problems)**
- ✓ **Parasitic infestations such as demodex mites or scabies**

Pyohex® Medicated Shampoo and Conditioner have great benefit over creams and lotions in that they can be applied all over, regardless of the amount of fur coverage.

- ✓ **The shampoo should be applied to a wet coat and lathered up.**
- ✓ **Leave on for 10 minutes before rinsing thoroughly.**
- ✓ **Distract the dog from licking during this period to prevent ingestion or inhalation.**
- ✓ **After rinsing, allow the dog to shake excess water from its coat and then rub the conditioner through the coat whilst still damp.**

## HOT TIP!

Use these **10 minutes** to treat your dog to a massage or game!
